COMPANY PROFILE

From essentials
To couture

FLEXIBLE PRODUCTION TAILORED FOR DIVERSE BRANDS

GENVIET Factory

20 Years of Denim Heritage

GENVIET Factory – 20 years of denim legacy, where technique meets style and craftsmanship becomes art. We don't just make garments—we elevate denim into a design statement. From wash techniques to chamfering, each step is infused with our dedication to precision, passion, and distinctive fashion sensibilities. This document provides an in-depth look at our production capabilities, modern engineering, artisanal quality, and versatile collaboration formats—showcasing why GENVIET is a trusted partner for FOB and ODM projects.

Journey of Growth

20Year Legacy

GENVIET FACTORY

GENVIET FACTORY

20Years

Denim Heritage

Where Engineering Meets Craftsmanship
Your Trusted Denim Manufacturing Partner

Origins & Evolution

Beginning as a modest in-country denim workshop, GENVIET Factory steadily transformed into a modern manufacturing landmark—where technical innovation, creative passion, and brand ambition converge.

2005–2007

Launched with ~50 artisans, specializing in local denim garment production

2007–2010

Transitioned into Tuan Kiet Co., Ltd., expanded workforce to ~100, and opened two flagship stores

March 7, 2010

Launched Genova Vietnam Fashion JSC, introducing nationwide distribution under “GENOVA”

March 2012

Rebranded to GENVIET JEANS—emphasizing a national identity

September 2013

Built a 12,888m² fully integrated factory in Hà Nam, equipped with Japanese machinery, 2.5 million pieces/year capacity, and nearly 800 team members.

Key Milestones

- September 2013
Production Expansion
Established integrated Hà Nam plant with imported Japanese lines and capacity of 1–1.5 million garments annually
- 2014
Technological Upgrades
Achieved ISO 9001:2008 certification, implemented ERP systems, invested in ozone and laser wash systems, and enforced AQL 2.5 quality checks using OEKO-TEX and Cotton USA materials
- December 2016
Responsible Production
Earned WRAP certification, validating ethical labor and environmental compliance.
- 2017
Launch of GVLux “Green” Line
Introduced GVLux sustainable denim brand; exports to the U.S., Japan, Korea, and Europe account for 70% of output, marking our entry into global markets.

Genviet factory is located in Ninh Binh (new name), with a total area of 12,888m², equipped with 863 machines and a team of nearly 350 workers. The factory specializes in producing denim clothing with a maximum capacity of 1,2 million products/year. In addition to serving the Genviet Jeans retail chain, the factory also cooperates with many international brands through CMPT, FOB and ODM forms.

CRITERIA	INFORMATION
Factory area	12.888m²
Workshop	Fabric & trims warehouse Cutting department Sewing department Washing department Finishing department Goods warehouse
Located	Cau Giat Industrial Zone, Duy Tan Ward, Ninh Binh
Machince quantity	863 pcs
Worker quantity	350 Workers (Include office, sewing and washing)
Line quantity	6 lines
Productiton capacity	1,200,000 pcs/ year

SAMPLING & PRODUCTION

Our modern sewing lines support flexible production from small batches to large-scale manufacturing.

Each garment is crafted with precision in form-shaping techniques—where craftsmanship meets aesthetic sensibility in every stitch

DESIGN & R&D

Our team of designers and R&D engineers is ready to turn ideas into reality. With on-site sampling capabilities, product development becomes flexible and fast—ideal for both seasonal orders and custom requirements.

WASHING

GENVIET Factory operates a multi-stage wash system equipped with state-of-the-art denim surface treatment machines. From enzyme washes and eco-washes to specialty finishes—all processes are carefully controlled to ensure durability, color accuracy, and environmental friendliness.

FINISHING & QUALITY CONTROL

Each denim product undergoes rigorous inspection under AQL 1.5 standards—one of the most stringent quality benchmarks globally. Today's Vietnamese consumers wear denim that meets international standards

LOGISTICS & DELIVERY

Our packaging, warehousing, and shipping processes are standardized to meet export demands from major markets like Japan, the EU, the US, and the Middle East. The factory is equipped with Japan-standard metal detectors to ensure maximum safety before dispatch.

MULTI-LAYER WASH SYSTEM

From basic to complex washing techniques, denim is processed to achieve natural fading and highlight the texture of every stitch—a tribute to authentic denim spirit.

NATURAL TONING & ENZYME WASH

Green enzymes and water-saving wash technologies create natural color gradients while staying eco-conscious—advancing sustainable denim solutions.

PREMIUM SURFACE TREATMENTS

Techniques like crinkling, abrasion, cracking, and fog coating enhance tactile depth and vivid appearance - transforming surface texture into a canvas of expressive style.

KEY EQUIPMENT

We operate high-capacity wash systems, high-precision laser cutters, heat-pressing machines, and advanced color-control equipment—ensuring consistent quality and refined aesthetics in every product.

LASER CUTTING & HEAT PRESSING

Allows the creation of geometric patterns, cultural motifs, and personalized details without compromising fabric integrity—unleashing creativity while maintaining high wearability

WASTEWATER TREATMENT SYSTEM

The centralized wastewater treatment system applies physico-chemical treatment combined with biological treatment and MBR (Membrane Bioreactor) technology.

The centralized wastewater treatment system has a treatment capacity of 550 m³/day. Of this volume, approximately 500 m³/day is recycled and reused for production, and the remaining volume is discharged to the environment.

The treated wastewater meets the requirements of QCVN 13-MT:2015/BTNMT (Column A) – the Vietnam National Technical Regulation on Industrial Textile Dyeing Wastewater, before being discharged into the receiving source.

The treated wastewater is discharged into the wastewater collection and treatment system of Cau Giat Industrial Cluster, then conveyed to the centralized wastewater treatment plant of the industrial cluster, with the receiving water body being Canal A4-13. The factory's maximum wastewater discharge volume is 150 m³/day.
